

My To-Do List application

Malith M.C. Ranasinghe

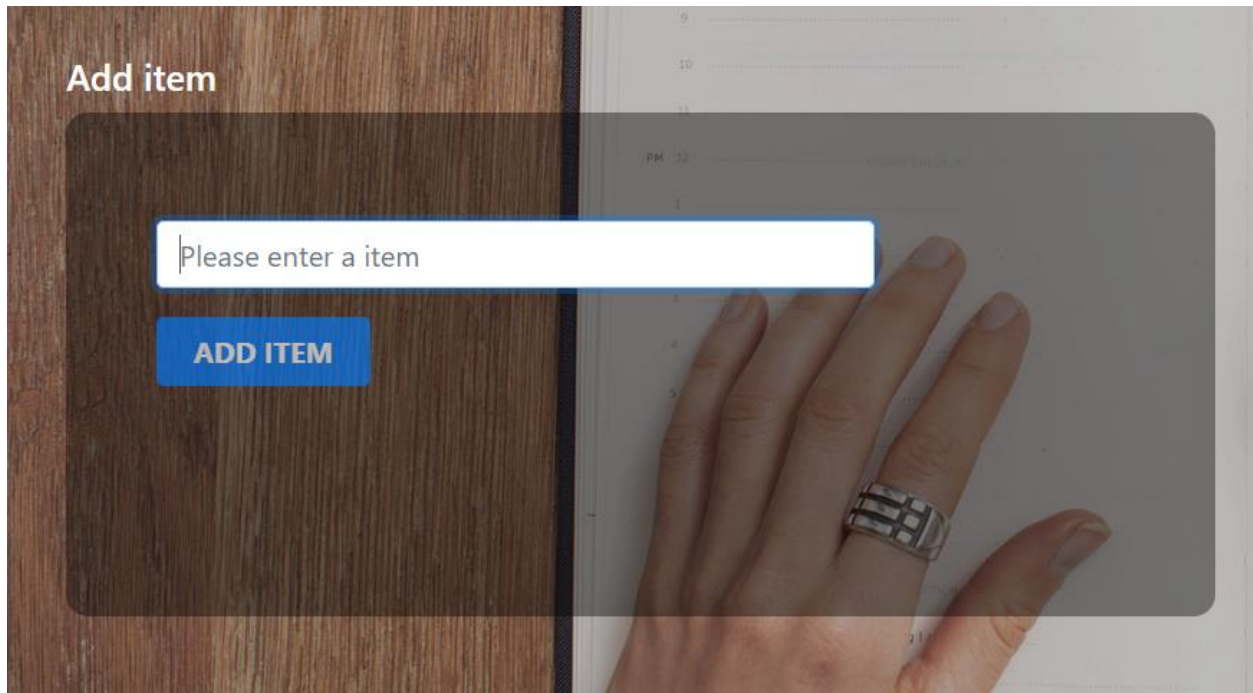

IT18097634

This is my react todo application. This application has add new item, edit item, completing item and delete item. When user clicked "Click here to complete" button item displayed by crossing respective item. Once item is completed it listed in the bottom of the item list. Also this application has mobile responsive

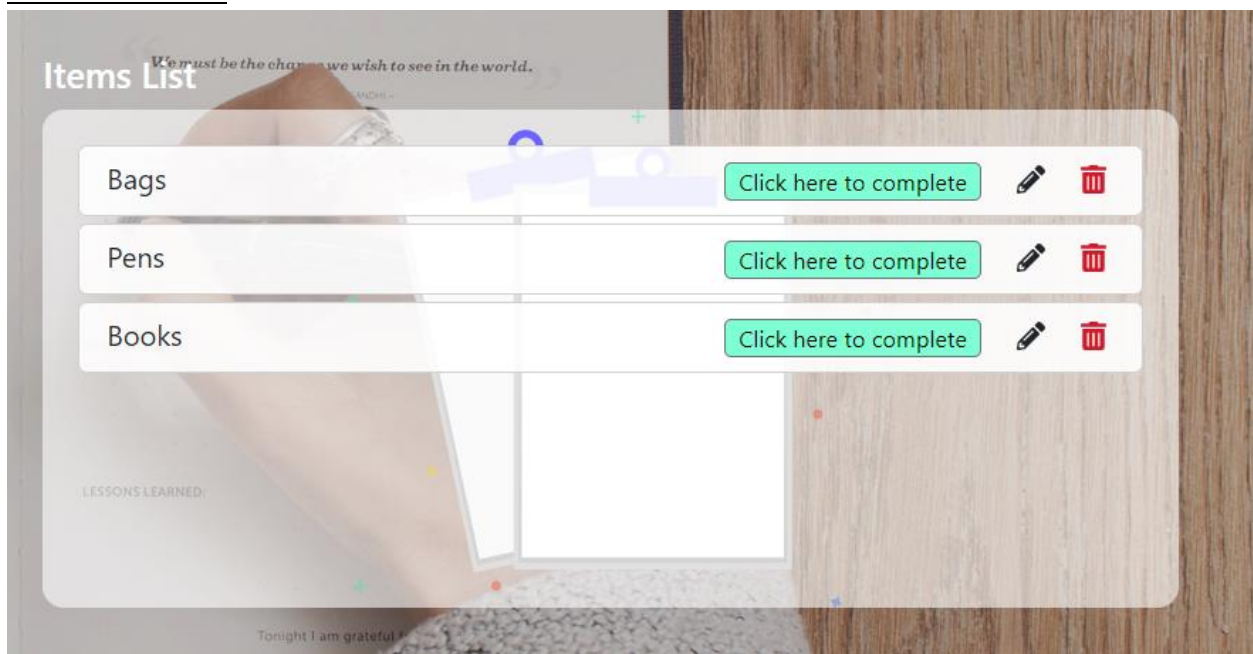

Adding new item.

User can add a new item using text field and submit button. If user add new item then newly added item listed on the top of the items list.

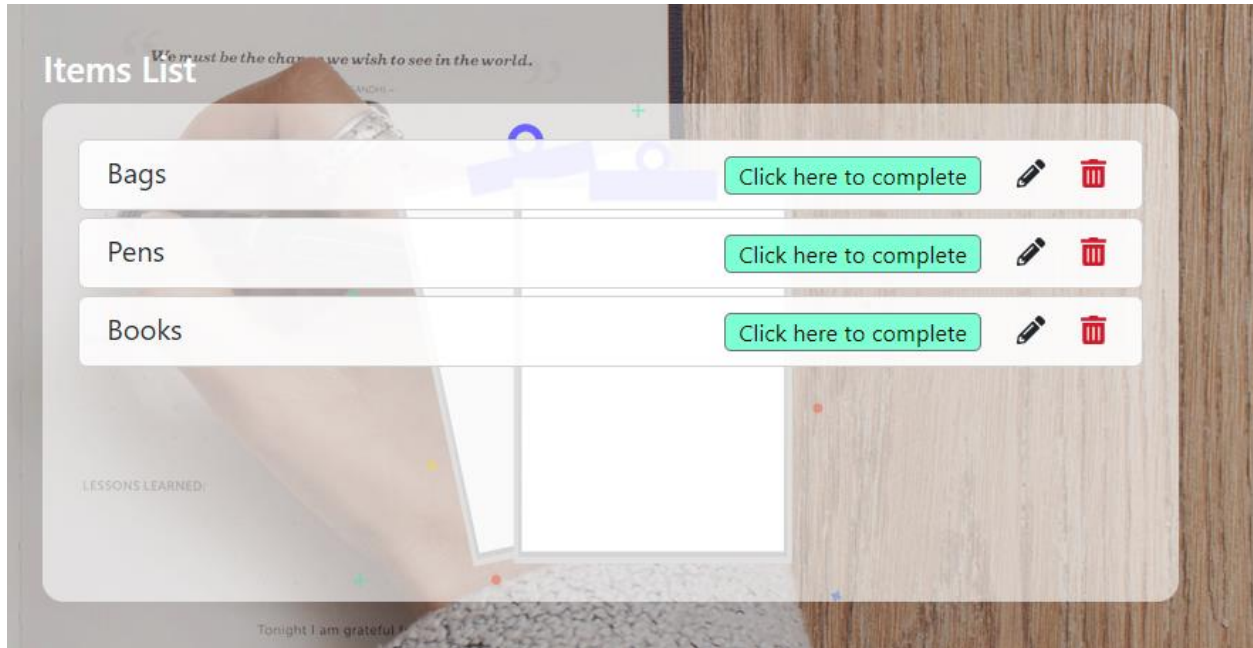

Added Items

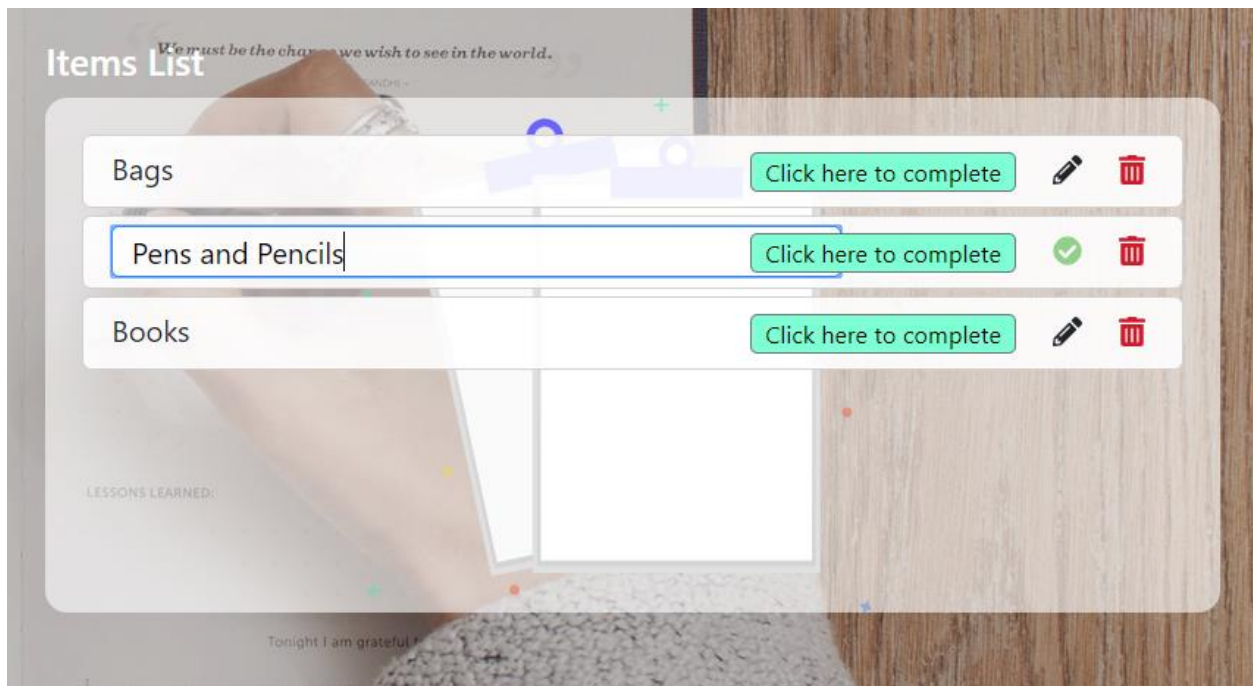

Edit item.

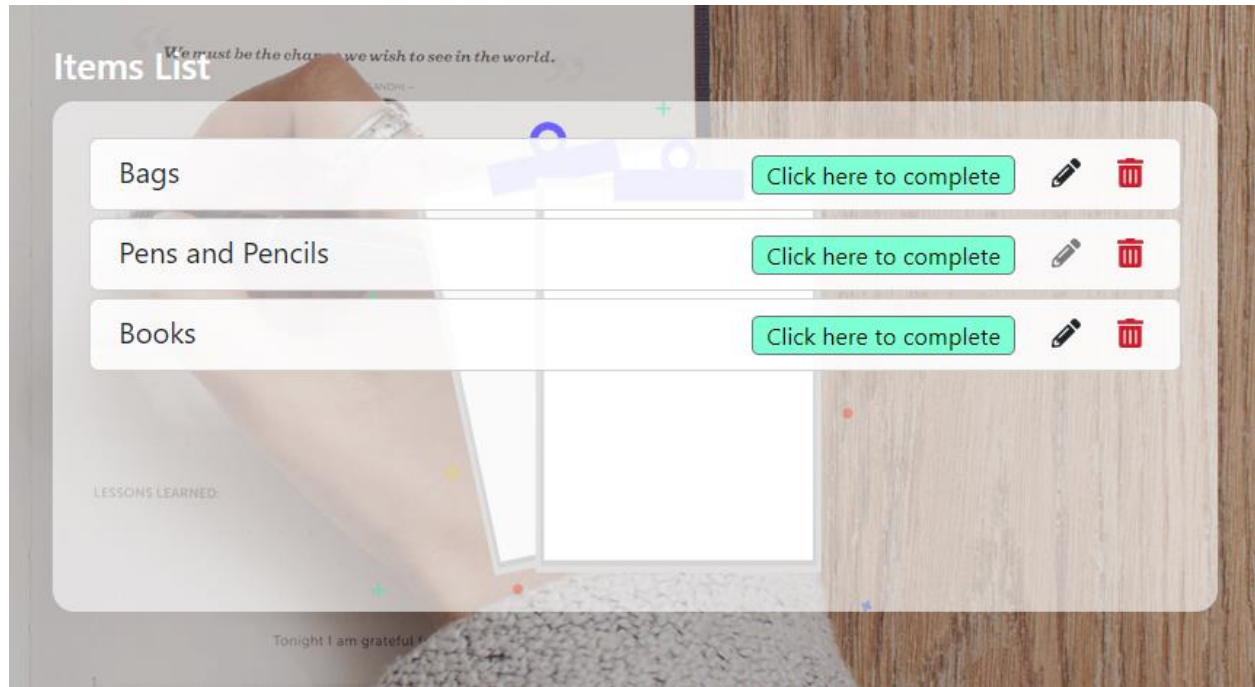

User can edit any item in item list clicking edit button. An item can be edited multiple times.

Click “Click here to complete” button

Edited Item “Pens” to “Pens and Pencils”

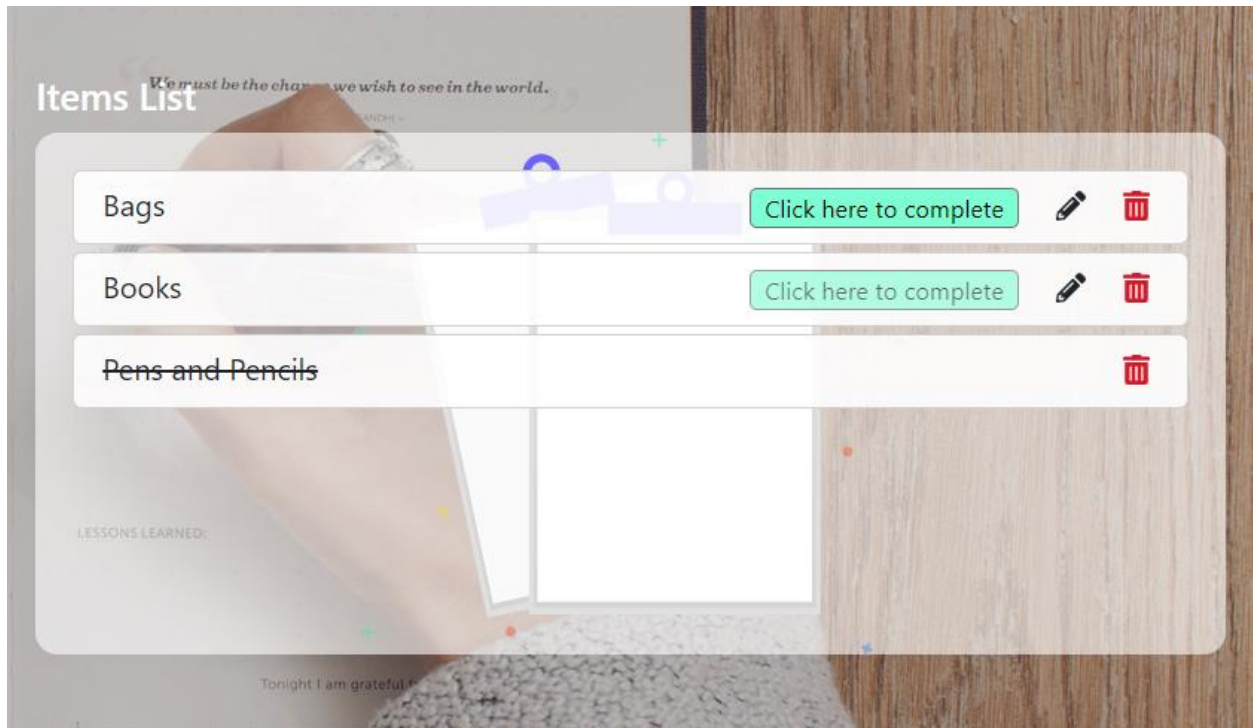

Completing an item

User can change item status to complete item. Then user can not edit the item. Item displayed by crossing the respective completed item. Once an item is completed, Item listed in the bottom of the items list.

Item completed when goes to bottom itemlist

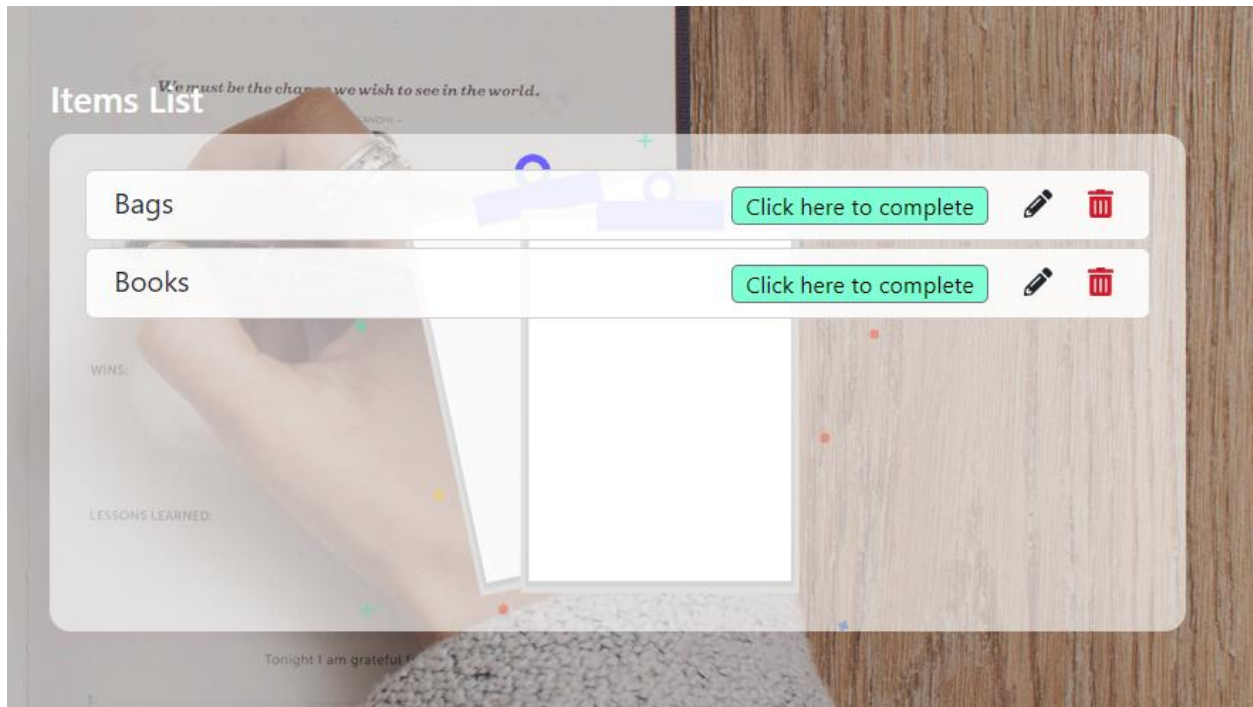

Pens and pencils item comes bottom in itemlist

Deleting an item

User can delete both pending and completed items .Once an item is deleted, Item removed from the items list

Deleted “pens and pencils” item.Then removed itemlist

Mobile responsive:
